

How to learn back-end

LECTURE
SUMMARY

PRE-PROGRAMMING

Covered in this lecture:

Where to start

- ▶ Back-end has the most options for learning
- ▶ First, pick a language
- ▶ Look at the companies you'd like to work for and see what language they use
- Ruby is best for web development and startups
- Python is the most flexible, you can program on desktop and the web
- PHP is best if you want to start your own thing or build something quickly
- Java is good if you want to work in a large company or want to build Android apps

See you next lecture!
